FUEL PUMPS

VISUAL IDENTIFICATION GUIDE AND BASIC ENGINE APPLICATIONS

Engines of the same series are frequently serviced with more than one fuel pump type. Visible differences between the pump may be the cover inlet or outlet or the separator ring position.

The cover position or separator ring position are determined as follows:

The angle between the rocker arm and the fuel inlet is expressed in terms of clock position. Place pump with rocker arm in the 12 o'clock position. Observe the relationship of the fuel inlet to the rocker arm. This position is the clock position of the pump. Examples of this in the ouline drawing shows that if the fuel inlet is at position "A", it is considered a 6 o'clock pump, if at position "B", a 3 o'clock pump, and at position "C", an 8 o'clock pump.

IMPORTANT INFORMATION

The Marine Industry installs various makes of ignition distributors into the engines it sells. These are Delco Marine, Prestolite, Mallory, Autolite and mercury Marine. It is the customer's responsibility to know what distributor is in the boat being serviced.

OMC NOTES:

* All OMC engines with Prestolite distributors use the clip on cap and rotor up to and including 1981 and the screw down cap and rotor from 1982 and newer.

* A 2:1 improvment over point type systems in current fall time.
* Stable timing with no need for periodic adjustments.
* Increase spark plug life by 2 to 3 times.
* No contacts to burn, pit and corrode.
* No moving and rubbing parts to wear out.
* Better foul weather performance.

FEATURES
